SGS s.r.l.: a Brand, a Symbol of Quality

Knowledge and technology, in addition to the love of Our engineers for the design and (thanks to) the passion of Our technicians for assembling the machineries are the secrets that make our welders an unique and indispensable line of products for all the polyethylene bags and packaging producers.

Machines created in synergy with the producers themselves, with a large possibility of customization.

Sought for their long mechanic and electronic duration, appreciated for their technical and functional simplicity, designed with an user-friendly interface.

Operators must be independent from the machines, that's why Our welders don't need any technical support.

Depending to the aim, every single machine has different functional and productive features: an important sign of quality with very interesting prices, compared to the most famous companies.

SGS is a company that uses its long time experience in order to develop new technologies, reach the maximum reliability and clearly reduce the production costs.

That's why We are honestly proud to present Our large line of machines:

- **STYLE:** It is an one-track machine, in 650 format. Automatically produces blocked or non-blocked shopper bags, with a high velocity of 250 cycles/min.
- **MEMORY PACK:** suitable for the production of blocked or non-blocked shoppers, this machine is available in 850, 1 100 or 1 300 format, with or without gusseting group and reaches a maximum velocity of 300 cycles/min.
- **MEMORY BLOCK:** available in 850, 1 100 and 1 300 format, with or without gusseting group, this machine is the perfect solution to produce blocked and pre-cut bags, also with C-shaped diecutters, with a maximum velocity of 300 cycles/min.

- CRONOS: a very polyvalent machine, available in 850, 1 100, 1 300 format with or without gusseting group, suitable for the production of blocked or non-blocked shoppers without using cold needles, bottom-welded bags with various types of diecutters and block-notes bags. The maximum velocity is 200 cycles/min with 50 cm length.
- CRONOS PLUS: the evolution of CRONOS machine, designed to produce bottom-welded bags with a double pressure exit, reaches the maximum velocity of 200 cycles/min. It is available in a larger range of formats: 850, 1 100, 1 200, 1 300, 1 700, 2000, 2200, with or without gusseting group. Customers could choose from various lengths, starting from 250 mm to a maximum of 5000 mm and thicknesses, starting from 8-10 microns x 2 to a maximum of 200 microns x 4.
- CRONOTEK: available in a huge range of formats (850, 1 100, 1 200, 1 300, 1 700, 2000, 2100, 2200 and 2500) this is a **patented** machine with double pressure stacking and fly-knife cut, designed to produce bottom-welded bags with thicknesses starting from 10 microns x 2 to 300 microns x 4, with different ranges of velocity depending by the format.
- UNISIDE: available in 600, 850, 1 100, 1 200 and 1 300 formats, this model has an on-tapes exit and is suitable for side-welded bags in L.D.Pe, H.D.Pe and polypropylene P.P. and Bo. P.P., with a maximum velocity of 300 cycles/min. Soft handle, patch or an automatic line with 3 sealing bars (double-weld, simple-weld and side-weld) can be added on customer's request to the UNISIDE machine, including an automatic system for an one-by-one slow down of the bags' stacking.
- CRONOROLL: equipped with a winder, this particular type of machine is specifically designed for the production of rolled shopper bags, high thickness bottom-welded, with or without carton cores. It is available in 850, 1 100, 1 200, 1 300 formats and reaches the maximum velocity of 250 cycles/min. CRONOROLL has 3 tracks with a maximum width of 38 cm each, within 4 winding workstations and paper closing. Automatic packaging is available on request.

SGS s.r.l. also provides a large range of accessories, such as:

- Hydraulic lifts
- Shaft-less till 2500 useful
- Automatic guide-film
- Sleaf/seal
- Gusseting groups till 2500 useful with a maximum height of 3200 mm
- Carriage with grippers
- Folding devices
- V-folding devices
- Winders
- Unwinders
- Punching tools
- Pre-cut on the welders
- Pre-cut in the extruder line
- Pre-cut and weld in and/or out the extruder line equipped with winders, side-cuts, central –cuts, sleaf/seals and 3 or 4 work stations automatic winders, with or without carton cores, maximum size: 2500, available on request.
- Longitudinal and transversal enforcing sealing.
- Slitter rewinders with a maximum velocity of 600 m/min.
- Stocker groups for automatic cores reload on the pneumatic-shaft.
- Automatic 2 stations-revolvers with core with an one or more tracks automatic core-reloading group.
- Automatic mini-grip groups.
- Semi-automatic patch and soft handle groups.

The company could finally be a reliable technical partner: Our engineers are formed to deal with every kind of technical problems, with the purpose to help customers finding the best solutions in industrial production.

For any further information, detailed explanation and clarification about our products, feel free to contact us.

Yours Sincerely
SGS s.r.l.
